Comsec Protection Systems

Our System

Proano offer an array of Nanomist systems that can be fitted to all cooker hoods ranging from 1.5m to 6m. There is a variety of different discharge options in the form of a manifold or spray head to suit all environments.

Nanomist systems allow the discharge heads to be situated up to 25m away from the main system components.

Design

Our NanoMist system is specially designed to be versatile for a range of sizes of cooker hoods and offers two different styles of discharge heads, depending on the customer's needs. The adaptability of our system results in the customer having full control of the design so that specific requirements can be accommodated.

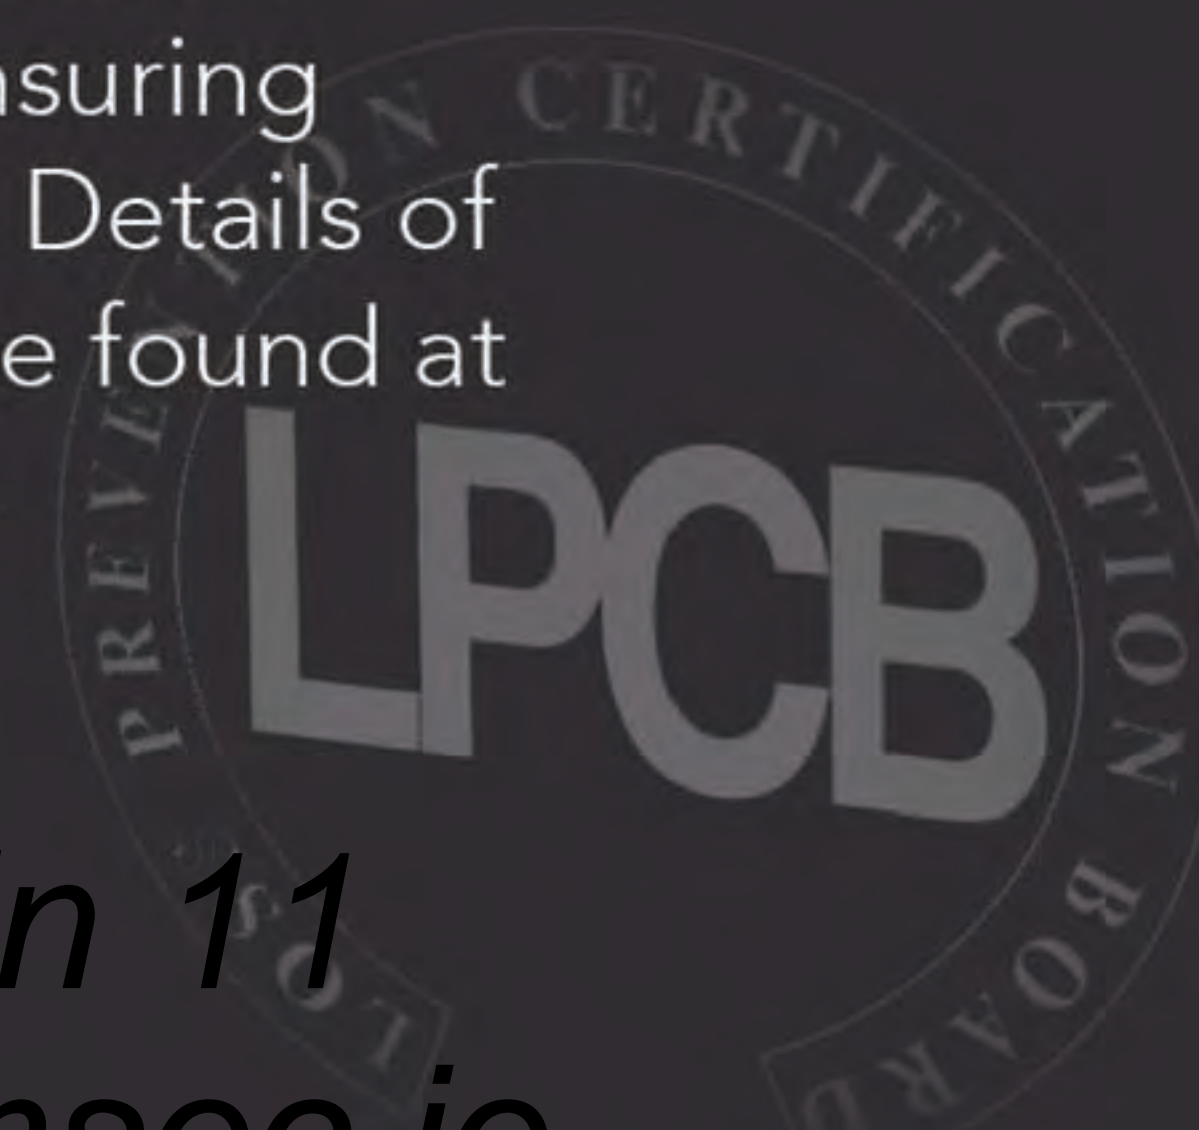

Supply

Proano has a range of experienced distributors throughout the world who are trusted with the installation of our NanoMist systems. We work alongside our distributors to guarantee our customers the most effective, products that have been manufactured to the highest standards.

Certification

Nanomist products are LPCB certified to LPS 1223 ensuring effective performance. Details of the certifications can be found at www.redbooklive.com.

Nando's Restaurants

Doha, Qatar

Problem:

Wet chemical discharge causing loss in revenue due to extensive down time.

Solution:

Nanomist 6m Watermist Suppression System

Nando's fast food restaurant benefited from NanoMist's ease of installation, and relished the minimal disruption to service.

After a forced closure of 4 days due to an accidental wet chemical discharge resulting in over £20,000 losses, Nando's management took the plunge into watermist in order to cut down on this incident happening again.

Nanomist prides itself for its super fast reinstatement, making it one of the quickest return to service cylinder based system on the market. We endeavour to provide the best service to our installers and thus through to the end customer, ensuring that any of our systems get the necessary support to get it back up and running in hours, not days.

Now Nandos can get back to doing what they do best – Chicken

Nando's

Al Safa Hotel

Doha, Qatar

Problem:

Lack of any fire suppression within active kitchen.

Solution:

2 Nanomist 4.5m Watermist
Suppression Systems

Located in the historical centre of Doha, Al Safa hotel suites cater to a range of appetites, offering two separate restaurants. With customer satisfaction their main priority, safeguarding their kitchen is crucial. NanoMist allows for rapid return to service and quick install times, meaning no-one goes hungry for long.

Reduced install time was paramount for Al Safa as the system was to be retrofit within an active catering environment, supplying food to the 282 apartment suits plus outside guests. Nanomist can be partially pre-installed allowing the engineer to simply fit the pipe work, secure the system, heads and activation then connect both ends. The systems flexibility allows our engineer to meet any unforeseen obstacles and work past them on site without recalculations. This job took two skilled install engineers 2 days to install and test both 4.5m systems.
